

SSM 53468 2021-2024 Mustang Mach-E, 2023-2025 Escape/Corsair - CMDTC U2016:47 Stored In The PSCM Without Observable Symptoms

Some 2021-2024 Mustang Mach-E and 2023-2025 Escape/Corsair vehicles may exhibit only continuous memory diagnostic trouble code (CMDTC) U2016:47 stored in the power steering control module (PSCM) after a self test is performed with Ford Diagnosis and Repair System (FDRS) scan tool. If the vehicle does not exhibit any observable symptoms such as lack or reduced steering assist, disable of steering assist features and/or steering assist fault messages displayed on the instrument panel cluster (IPC), this DTC should be ignored. No further service action is required.
