

SSM 54351 2026 Transit - DTC U016A Stored In The SOBDMC And/Or U0146 Stored In The ABS

Some 2026 Transit vehicles built without a telematic control unit module (TCU) (minor feature code IEPA) may exhibit diagnostic trouble codes (DTCs) U0146 stored in the anti-lock brake system (ABS) module and/or U016A stored in the secondary on-board diagnostic control module C (SOBDMC) when a diagnostic self-test is performed. Because these vehicles are not built with a TCU, no diagnosis or repair is required.

To confirm a vehicle is built with minor feature code IEPA, review the build information by double-clicking the vehicle identification number (VIN) in the upper left corner of the Professional Technician System (PTS).
