

SSM 52109 2024 Nautilus - DTC U211C:04 Setting In The GWM When A Diagnostic Self-Test Is Performed

Some 2024 Nautilus vehicles may set diagnostic trouble code (DTC) U211C:04 in the gateway module A (GWM) when a diagnostic self-test is performed. This may be due to a module communication error within a specified timeframe. DTC U211C:04 has no effect on functionality and will automatically become a historical DTC which can be cleared. Replacement or reprogramming of the GWM will not resolve this condition. Engineering is currently working on a software update which is expected in Q1 2024. Continue to monitor OASIS for additional information.
