REDEFINING THE EQUATION FOR 2+2.

The concept of the 2+2 has been with us for decades. Defined, it's a two-seat sports car with two more seats – two plus two. It's for those who want a thrilling driving experience without fully compromising practicality.

That is the definition. Now we present the redefinition: the BMW 6 Series Coupe and Convertible.

On the thrilling driving side of the 2+2 equation, our engineers and designers have honed the BMW 6 Series' sporting character to a fine edge. Outside, a longer, lower and wider body flashes a more aggressive yet graceful stance. Under its long hood we offer you a choice of heart-pounding power sources: a 315-hp TwinPower Turbo inline 6 or a 400-hp TwinPower Turbo V-8, both of which connect to the road via a 6-speed manual transmission or an 8-speed Sport Automatic with fast-acting steering wheel-mounted paddle shifters.

On the practical side you'll discover a full range of standard and optional driving systems to keep you firmly in control, fully informed, richly entertained and sumptuously comfortable. This includes BMW ConnectedDrive for fast access to Google Maps™-assisted navigation, full-color Head-up Display, Real Time Traffic Information and more. On the entertainment side you can select either a nine-speaker HiFi audio system, or an available Bang & Olufsen 16-speaker High-End Surround Sound System especially designed for the 6 Series Coupe. Each delivers sparkling audio range and presence while you listen in the supple comfort of a lovingly crafted and exquisitely detailed interior.

The ultra-advanced and elegantly refined BMW 6 Series Coupe and Convertible take the 2+2 driving experience to the next level. Now the only element missing from the equation is you.

AN ATHLETIC SOUL,
ELEGANTLY EXPRESSED.

Longer, wider, lower, more muscular. We've made the sporting character of the BMW 6 Series even more emphatic. Its flowing lines frame a gracefully athletic stance. The redesigned front end area features the signature BMW double-kidney grille, flanked by four Corona headlight-rings – now framing available Full LED headlights with Adaptive and Automatic high beams functionality. All curved surfaces and character lines are sharply defined and tightly curved to create an elegant, elongated silhouette. Bulging wheel arches frame the striking alloy wheels, a visual manifestation of dynamic road-holding ability. The total effect is breathtaking.

A masterpiece down to the smallest detail: the long side line draws your attention to the Full LED foglights, which give the front of the vehicle even more impressive character.

YOU'VE NEVER FELT POWER
IN THIS WAY.

Power as an extension of your desires: an available 8-speed Sport Automatic with steering wheel-mounted paddle shifters sprints you forward.

We creatively engineer power to a standard of how it feels to the driver. Let us explain. Do you feel power instantly? Do you feel power flowing smoothly yet decisively throughout the acceleration event? Do you feel in control of power delivery? Indeed, the BMW 6 Series' raw power is impressive. Choose 315 hp from a TwinPower Turbo inline six-cylinder or 400 hp from a TwinPower Turbo V-8, transmitted through either a silky shifting 6-speed manual or 8-speed Sport Automatic with steering wheel-mounted paddle shifters.

ON THIS STAGE, THE CAR
SUPPORTS THE STAR – YOU.

BMW ConnectedDrive makes everyday driving easier. In the BMW 6 Series Coupe and Convertible, innovative assist systems are focused on you, the driver – connecting you, the vehicle and the road. A full-color Head-up Display streams relevant data, such as your speed, Navigation system instructions, even warning messages from driver assistance systems, directly onto the windshield, helping you keep your eyes focused on the road. And when you arrive, not only can the Parking Assistant feature tell whether you'll fit into a parking spot – it can even do the parking for you.

ZERO TO SKY
IN 19 SECONDS.

Forward-thinking rear window: the glass rear window can be raised or lowered with a touch of a button – independent of the softtop – for customized ventilation on demand.

The BMW 6 Series Convertible takes the softtop to new heights. BMW advances convertible softtop technology in several ways. The first is how quickly it operates, retracting in 19 seconds and closing in 24 seconds, all while traveling up to 25 mph. Next is flexibility and comfort: the upright heated glass rear window can be raised and lowered electrically – and independently of the softtop. This allows for what our engineers call a “California” mode: driving top-up with the rear window down. You’re protected from the sun while the open side and rear windows allow a generous flow of fresh air. Trust BMW to present sun and sky in a whole new way.

Electro-hydraulic brakes instantly activate a range of technologies to help keep you in control, whether slowing on wet or dry roads. Available Integral Active Steering adapts steering effort to you, not the other way around, and enhances cornering geometry by adding rear-wheel steering. Dynamic Stability Control anticipates slides before you feel them and corrects them in a flash, while Dynamic Traction Control minimizes wheelslip on slick surfaces. Available for the first time in the BMW 6 Series, xDrive intelligent all-wheel-drive system reads the road and reacts instantly to your driving demands. Sound intriguing? **INDULGE YOUR PASSION
WHILE PRESERVING THE ENVIRONMENT.**

BMW EfficientDynamics: solutions to sustainability challenges. BMW owners love driving – and the environment in which they drive. The aerodynamic BMW 6 Series satisfies these demands by combining high performance with low fuel consumption and emissions. The entire drivetrain, from engine to transmission, bristles with high-efficiency technologies – electronically controlled engine cooling is just one innovative example. Another is the 8-speed Sport Automatic transmission that makes the most of the engine's power in all gears. The drivetrain even enhances efficiency every time you take your foot off the accelerator: kinetic energy lost when coasting or braking is converted into electrical power via Brake Energy Regeneration.

Sustainability and precision is achieved through an advanced array of innovative technologies.

LIGHT UP THE FUTURE.

This is the first BMW Series to showcase Full LED headlights with Adaptive and Automatic high beams functionality. Their bright white light is an active safety feature that helps make every journey more comfortable. Thanks to the unique light design and distinctive profile, you not only see better in the dark, but are more visible to other drivers.

Good vision is one of the most important requirements for steering safely through traffic. To experience this at night, you need high-power, high-contrast light.

The lighting concepts produced by BMW have always been a little brighter than those of other manufacturers. Just under 20 years ago, the BMW 7 Series was the first to offer

headlights using Xenon technology. These HID (High-Intensity Discharge) lights provide daylight-like brightness to illuminate the street with double the luminosity of standard halogen headlights. And now this brilliant technology is followed by the latest in lighting: LED systems.

The BMW 6 Series Coupe and Convertible are the first BMW models to offer Full LED

Low and high beams can be generated by available LED technology. As with the Adaptive turning lights and Automatic high beams, the headlights follow the course of the road and adapt to traffic conditions.

headlights with Adaptive and Automatic high beams functionality, providing a new visual experience. Light-emitting diodes (LED) are used in the parking lights, daytime running lights, high and low beams, turn-indicator lights and Cornering Lights. Additionally, the LED headlights incorporate the functionality of Adaptive turning lights and integrated Automatic high beams. Pivoting light cones provide extra visibility in corners; illumination levels change, as appropriate, for city driving, country roads and highways.

The key difference between LED lights and the bright bluish arcs of Xenon lights or the yellowish hue of conventional halogen lamps is the extremely white light typical of LED technology. No other car lights approximate natural daylight so effectively. As a result, drivers find this light even brighter, with more intense contrast, than the already superb Xenon technology.

Experts, such as BMW light engineer Ulrich Henseler, predict that these light diodes have a bright future ahead of them. "The light-emitting efficiency of LED technology has increased in just a few years from 50 to just under 100 lumens per watt. LEDs also score high because they have an almost unlimited shelf life and their properties open up new design opportunities."

In the BMW 6 Series Coupe and Convertible, the headlight design symbolizes athletic elegance. The light architecture behind the dynamically curved glass is also unique in terms of functionality. For the first time,

Full LED headlights with Adaptive turning lights are being used in a distinctively sporty BMW design. The light-rings are three-dimensional, and flattened at top and bottom. Double-round headlights project the LED low and high beams from two Corona headlight-rings. The shortened accent lights are similar to a pair of eyebrows; at night they produce a unique, signature look – one that makes the BMW 6 Series Coupe and Convertible seem even more focused and purposeful.

HIDDEN BEAUTY.

A light installation by Paul Cockledge for BMW and Flos.

As part of the Milan Salone del Mobile 2011, BMW and designer light company Flos presented a very special, innovative project.

The British designer Paul Cockledge was commissioned to create the fascinating light installation, "Sesto Senso." The focal point was the allure of the unseen – namely BMW LED technology and the BMW 6 Series Coupe. Cockledge installed a seamless, curving white wall extension to the Flos showroom in Milan, featuring huge lamps. Thanks to LED technology, the light sources within each lamp remained largely invisible. Observers were able to step into the lamps and, from there, see a video of the BMW 6 Series Coupe.

Because of its strong emotional significance and relation to the driving experience, lighting design has always been given a high degree of importance within the BMW Group. The BMW Design team focuses on human perception of light, harnessing new technologies in a creative way to achieve user-oriented solutions. As for inspiration and ideas, cooperation with designers and artists has a significant role to play for BMW.

Concert hall.

With its excellent acoustics, outstanding design and elegant lighting, the powerful Bang & Olufsen® High-End Surround Sound System fills the BMW 6 Series interior with rich, authentic sound.

Sixteen speakers in the BMW 6 Series Coupe and 12 speakers in the Convertible generate a maximum of 118 decibels of acoustic pressure. Additionally, two subwoofers are under the front seats.

Dynamic design. Innovative technology. Impressive details. The interior of the BMW 6 Series provides a highly rewarding on-road experience – and the on-board entertainment has a central role to play.

The available Bang & Olufsen High-End Surround Sound System, for example, offers a level of sound perfection that even the best home audio systems rarely achieve. Driven by 1200 watts of power through 16 speakers in the Coupe, and 1000 watts through 12 speakers in the Convertible, the system generates up to 118 decibels of acoustic pressure, turning music into a sensuous feast. You'll feel a bass-heavy drum performance deep in your body; emotional solos will give you goosebumps. Close your eyes – the immediate surroundings of the interior will melt away, leaving you feeling as if you have been transported to a concert hall.

These effects are the product of the finest HiFi components, as well as outstanding digital signal processing. And whether the signals come from the CD drive or a connected MP3 player, in the BMW 6 Series Coupe, sound is transferred precisely and cleanly via a specially balanced amplifier. It is then generated by two subwoofers under the front seats, as well as seven tweeters and seven midrange speakers in the dashboard, the interior paneling and rear shelf. With their neodymium magnets and special honeycomb structure membranes, these components are nothing less than first class.

The Bang & Olufsen High-End Surround Sound System was specifically designed to perfectly counterbalance any acoustic disadvantages inherent in car design. Revolutionary Dirac Dimensions Technology calculates and

corrects, in advance, all sound distortions arising from the structures of the interior; asymmetrically positioned speakers also address the issue. The result: clean, natural sound throughout the cabin. Choose the Expanded mode, and music in the BMW 6 Series sounds as if the speakers are positioned around the car at a greater distance from each other than they actually are. Thanks to the Acoustic Lens technology, all on board, wherever they are sitting, will perceive the acoustic pattern of the system with the same degree of quality.

Thanks to its tasteful, modern design, the Bang & Olufsen High-End Surround Sound System is also easy on the eyes. Speaker frames are made of anodized aluminum and discreetly illuminated by white LEDs. In addition, the central speaker in the middle of the dashboard raises and positions the Acoustic Lens. It all combines to make any journey with the Bang & Olufsen High-End Surround Sound System a unique entertainment experience.

BMW ConnectedDrive In touch with your world.

Every day, our world is becoming increasingly networked. Many BMW drivers, however, are better connected than the rest, obtaining information on the road, communicating by phone or email, and always updated on the latest events. BMW ConnectedDrive encompasses all these services, including traffic features that allow BMW vehicles and their occupants to network with the outside world.

BMW CONNECTED DRIVE: A MELDING OF IMPRESSIVE IDEAS AND INNOVATIVE TECHNOLOGY.

Wherever the road may take you, you'll always be in touch, thanks to BMW ConnectedDrive. These advanced safety, convenience and infotainment capabilities make any trip easier and more pleasurable than ever before.

Parking Assistant makes parking a breeze by searching for suitable parking spots and then steering your vehicle into them. Simply press the "Park Assistant" button, then drive along potential parking spaces on the left or right side of the road, staying below 22 mph and no more than five feet away. Using ultrasonic sensors integrated into the side indicators, the system searches for and measures parking spaces. When a space at least four feet longer than your vehicle is spotted, it is shown on your Control Display. Shift into reverse and Parking Assistant takes control of steering your vehicle into the selected space; you operate the accelerator and brake pedals. The acoustic and visual warnings of Park Distance Control (PDC) provide assistance.

Top-, Side- and Rear-view Cameras around the vehicle show the surroundings on the Control Display, for enhanced visibility. The **Top-view Camera** provides a bird's-eye view of the road alongside the doors. These images, taken by cameras positioned in the exterior mirrors, help guide you when maneuvering in tight spaces. **Side-view Cameras** in the front bumpers show traffic approaching the front of the vehicle from the sides, such as when exiting a garage. The **Rear-view Camera**, located behind the BMW badge on the trunk lid, shows the area behind the vehicle. Working with Park Distance Control, interactive guidelines indicate if the vehicle can fit in a parking space, and display parking trajectories and turn angles.

Active Cruise Control with Stop & Go function and Front Collision Warning System lets you preset both desired speed and following distance. When Active Cruise Control recognizes slower vehicles ahead, it reduces your speed to maintain a preset distance. Once the lane ahead becomes free, the system accelerates up to the desired speed. In slow-moving traffic, Stop & Go can bring you to a complete stop, if needed. The Front Collision Warning System alerts you if your vehicle is in danger of running into the vehicle ahead. If necessary, the brake system also prepares to engage. Even when not using the Active Cruise Control technology, the Front Collision Warning System is still active.

BMW EfficientDynamics

Less emissions. More driving pleasure.

BMW is passionate about researching and developing systems that ensure advanced and efficient mobility. Which is why the BMW 6 Series Coupe and Convertible, like every BMW, come with comprehensive, multi-award-winning BMW EfficientDynamics technology. BMW EfficientDynamics innovations reduce fuel consumption and CO₂ emissions while maximizing engine output and dynamic performance. Less fuel, more driving pleasure – a contradiction that BMW has resolved once and for all.

BMW Vision EfficientDynamics: Vision becomes reality. In 2014 BMW plans to debut the BMW Vision EfficientDynamics test model – a 2+2 sports car featuring groundbreaking plug-in hybrid technology that combines sports-car performance with compact-class consumption. Powered by the latest-generation, full-hybrid system, the vehicle – in concept form – generates a total of 328 hp through a 161-hp, three-cylinder turbo diesel engine with 214 lb-ft of torque, as well as a hybrid synchronous engine on the front axle and fully hybrid drive system on the rear axle. With a range of up to 435 miles, its ratio of performance to fuel consumption is without equal, positioning BMW as the world's leading manufacturer of exceptionally efficient, sporty vehicles.

bmwusa.com/EfficientDynamics

BMW EFFICIENT DYNAMICS. VEHICLES THAT REQUIRE LITTLE AND GIVE A LOT.

BMW was one of the first automotive manufacturers to pursue efficient driving technologies – one part of our award-winning sustainability strategy. Our commitment to EfficientDynamics means we are continuously developing innovative systems that bring us closer to our long-term goal of emissions-free mobility. However, we remain equally committed to driving pleasure, which is being pursued in different ways. First, there is the continuing optimization of conventional diesel- and gasoline-powered models. Second, BMW hybrid vehicles are already on the road. Third, the first 100% electrically powered BMW – the BMW ActiveE – is being distributed in a field trial to customers. And fourth, the fleet of BMW Hydrogen 7 vehicles impressively demonstrated the potential for combining hydrogen drive with a combustion engine.

Since 1995 BMW has been able to reduce the CO₂ emissions of its entire fleet by approximately 30 percent. BMW has rolled out more than two million vehicles equipped with EfficientDynamics: 31 models already produce less than 225g of CO₂ per mile, and BMW intends to achieve a further 25 percent reduction by 2020. BMW EfficientDynamics represents the most comprehensive package of innovative technologies currently in production, for reducing fuel consumption and emissions while simultaneously creating The Ultimate Driving Machine®.

Different paths to the same destination: unmistakable BMW driving pleasure.

In early 2010 BMW launched its first production models with hybrid drive: the BMW ActiveHybrid 7 and the BMW ActiveHybrid X6. Both models offer an unparalleled combination of increased fuel efficiency, reduced emissions and thrilling performance. The BMW ActiveE, with its innovative 100% electric drive system, will introduce a whole new form of dynamic performance, paving the way for the future of emissions-free mobility. Finally, a completely new vehicle concept targeted at meeting the need for sustainable mobility in fast-growing metropolitan areas will soon become reality: the BMW i3.

AT A GLANCE: BMW EFFICIENT DYNAMICS INNOVATIONS IN THE BMW 6 SERIES COUPE AND CONVERTIBLE.

BMW TwinPower Turbo technology.

This innovative turbocharging technology efficiently reclaims the energy contained in exhaust gases, using two turbochargers in the BMW 650i, or a twin-scroll charger with a double-flow exhaust system in the BMW 640i.

High Precision Direct Injection.

In this latest-generation direct fuel injection system, the piezo injectors are positioned very close to the spark plugs. They inject fuel at high pressure, with extreme precision, for very efficient combustion.

Double-VANOS valve timing.

BMW's VANOS valve timing system "steplessly" varies the points in the combustion cycle when valves open and close. Double-VANOS refers to the fact that it operates on both the intake and exhaust camshafts. Electronically controlled in response to engine speed, temperature and load, it reduces emissions, and enhances low- to medium-speed torque, as well as fuel efficiency.

8-speed Sport Automatic transmission.

The close spacing of gear ratios in this 8-speed Sport Automatic transmission makes maximum use of the optimum rev range, reducing fuel consumption and allowing smoother shifts.

Automatic Start/Stop function.

An idling engine burns fuel unnecessarily. The Automatic Start/Stop function in the BMW 640i enhances fuel efficiency by switching off the engine when the vehicle is not moving. (The intelligent electronics system first checks the battery charge level and calculates if other electric systems, such as the air conditioning or heated rear windshield, require more energy.) Once the footbrake is released, the engine starts up again almost instantly.

Optimized fuel efficiency.

BMW EfficientDynamics enables every BMW engine to provide maximum power while using a minimum of fuel. In the BMW TwinPower Turbo V-8 engine, two parallel turbochargers are positioned between the cylinder banks. This compact design with shorter intake paths provides power and performance at a previously unattainable level.

Brake Energy Regeneration.

In vehicles with Brake Energy Regeneration, the alternator generates electricity only when the driver takes his or her foot off the accelerator. Kinetic energy that was previously unharnessed is transformed into electrical energy, which is then fed into the battery. In this way, electricity is generated without consuming fuel.

IT ALL REVOLVES AROUND YOU. SEVERAL THOUSAND TIMES PER MINUTE.

Engines that power innovation. Year after year, BMW engines have garnered accolades for their output, refinement and high-revving ability. Beneath the long hoods of the BMW 6 Series Coupe and Convertible are two of the world's most sophisticated engines. They are designed to deliver on BMW's EfficientDynamics philosophy: increased power with decreased fuel consumption and emissions. You'll enjoy the thrill of BMW performance while helping to protect the environment every day.

BMW's 4.4-liter TwinPower Turbo V-8 is the essence of an iron fist in a velvet glove. Calling on two parallel turbochargers, its robust 400 hp accelerates the 650i xDrive Coupe smoothly from 0 to 60 mph in 4.7 seconds¹, while the boost from 450 lb-ft of peak torque is sustained from 1750 all the way to 4500 rpm. Thanks to High Precision injection, this V-8 is also extremely fuel efficient.

A choice of quick-shifting transmissions
Make full use of the BMW 6 Series' deep reserves of power through a seamless 8-speed Sport Automatic transmission, which also lets you shift gears using steering wheel-mounted paddles or the shift lever. For those who desire even greater hands-on control, the BMW 650i Coupe and Convertible can also be ordered with a smooth-shifting 6-speed manual transmission.

This unique engine combines a twin-scroll TwinPower Turbo, High Precision Direct Injection, and BMW's Valvetronic variable intake technology that helps the engine "breathe" better. The result: turbo lag is virtually eliminated, while posting one of the most fuel-efficient ratings in its class. The 640i develops maximum output of 315 hp at 5800 rpm, redlining at 7000 rpm. Peak torque of 332 lb-ft kicks in almost immediately at 1400 rpm. It continues to push you back in your seat all the way to 4500 rpm. In just 5.5 seconds² you're easily passing 60 mph – and just as easily surpassing all expectations.

¹ 650i xDrive Convertible: 4.8 seconds; 650i Coupe and Convertible: 4.9 seconds. BMW AG test results. BMW urges you to obey all posted speed laws and always wear safety belts.

Every BMW vehicle is engineered to provide the most thrilling and precise connection to the road. This is achieved through innovative axle technologies that increase stiffness front and rear, while reducing weight through the use of lightweight aluminum components. The BMW 6 Series' near-perfect 50/50 weight distribution offers strikingly well-balanced road feel, with responsive characteristics virtually unmatched by any competitor on the road today.

THE BEST FOUNDATION FOR DYNAMIC PERFORMANCE: A SUPERIOR CHASSIS.

The BMW 6 Series Coupe and Convertible can be equipped with a whole host of innovative technologies to help you get the most out of each drive. Many of these systems are intelligently networked with each other, maximizing your active safety quotient – and your driving pleasure.

Integral Active Steering.

At speeds of up to 30 mph, with Integral Active Steering, a small turn of the steering wheel yields a greater turn of the front wheels for more direct response. This feature also steers the rear wheels up to 2.5 degrees in the opposite direction, giving the effect of a shortened wheelbase for enhanced maneuverability. When changing lanes at speeds over 50 mph, both front and rear wheels turn in the same direction, giving the feel of an extended wheelbase. While you experience greater responsiveness and directional stability, your passengers enjoy greater ride comfort from reduced body roll.

8-speed Sport Automatic transmission.

This transmission adjusts to your style – from comfortable cruising to very dynamic driving. To change gears, you can use the selector lever or steering wheel-mounted gear shift paddles. In Sport mode, modified clutch settings allow very quick adjustments in engine speed, for minimal shift times. The close spacing of the eight gears optimizes acceleration, while also maximizing efficiency and comfortable shifting.

Driving Dynamics Control.

In vehicles equipped with the 8-speed Sport Automatic transmission, you can adjust the driving characteristics by simply pressing a button. Choose from four settings, COMFORT, NORMAL, SPORT and SPORT+, to adjust engine-throttle response, transmission shift characteristics, and power-steering assist. In addition, the traction control feature can be disengaged when driving on sand, gravel, or deep or packed snow.

Dynamic Damping Control.

Ride-enhancing Dynamic Damping Control instantly adjusts shock absorbers from the softest to the firmest settings. The result is exceptional ride comfort and fluid handling at all times – during changes in vehicle speed, load, or road and driving conditions.

Active Roll Stabilization.

A vehicle's body tends to roll in corners, affecting handling. Performance-elevating Active Roll Stabilization (ARS) twists special two-piece anti-roll bars to generate stronger resistance to body roll, keeping the vehicle more level and providing maximum stability and agility.

xDrive intelligent all-wheel-drive system.

BMW's intelligent all-wheel-drive system in the 650i xDrive Coupe and 650i xDrive Convertible provides maximum traction, even in the most slippery conditions. The system monitors data such as engine speed, steering angle, wheel speeds and acceleration. On smooth, dry roads, more power is normally sent to the rear axle, giving vehicles with xDrive the feel of their rear-wheel-drive counterparts. But hit a wet uphill curve, for instance, and even before wheelspin can occur, the system immediately recognizes any need for a change in power distribution. Using a controlled clutch, it sends more torque to the front axle to enhance stability and achieve greater traction.

HIGH-TECH BODYGUARDS: ACTIVE AND PASSIVE SAFETY.

The 6 Series is designed with BMW's full range of standard state-of-the-art active and passive safety technologies. Active safety features, such as Xenon Adaptive Headlights, powerful engines and large brakes, help you see and respond to potentially dangerous situations. Should an accident prove unavoidable, passive safety features, such as airbags and, in the BMW 6 Series Convertible, Rollover Protection, are designed to help protect you and your passengers. After a severe impact, a host of features spring into action: the doors automatically unlock, headlights and taillights flash, the starter cable is disconnected from the battery and the fuel supply is cut off. Should any airbags deploy, BMW Assist™ response specialists are automatically alerted and notified of your location.

Dynamic Stability Control (DSC). This system provides remarkable tenacity on slippery road surfaces. If it senses over- or understeer, it modulates engine power and can apply brakes individually to help keep the vehicle under control and going in the intended direction. Start-off Assistant, a feature of DSC, prevents the vehicle from rolling backward on a hill for 1.5 seconds after taking your foot off the brake. The system also includes Brake Fade Compensation, which lets you use the same amount of pedal force, even when the brakes are heated; Brake Stand-by, which pre-tenses the brakes for quicker action if you suddenly remove your foot from the accelerator pedal; and Brake Drying, which periodically brings the brake pads into contact with the rotors to eliminate accumulated moisture when it rains.

Run-flat tires. Thanks to reinforced sidewalls, run-flat tires maintain their shape and rim position even after suffering a complete loss of pressure. In fact, you can drive up to 150 miles at reduced speeds, so you don't have to stop in an unsafe area to change a tire or wait for Roadside Assistance. The Tire Pressure Monitor alerts you when there is a drop in tire pressure; if the loss is severe, an acoustic warning is triggered.

Dynamic Traction Control (DTC). This sub-function of Dynamic Stability Control raises the threshold for engine and braking intervention. Activated by simply pushing a button, this traction mode allows increased yet controlled wheelslip, helping to improve propulsion in deep snow or sand. When activated, it also provides an even sportier driving style.

Xenon Adaptive Headlights for low- and high-beams enhance illumination of the road ahead at night or in poor visibility. Four LED Corona headlight-surrounds, which can be used as Daytime Running Lights, also serve as parking lights. Adaptive Headlights provide optimum illumination of the road ahead when the car enters a turn. Light distribution is automatically adapted to the road speed and steering angle. Cornering Lights, positioned in the two inner headlights, are automatically activated by using the turn indicator or changing the steering wheel angle, even when the vehicle is at rest.

Airbags. In the event of a collision, BMW's supplemental restraint system (SRS) determines which airbag(s) to deploy for optimal protection. When a safety belt is used, airbags deploy only at a higher crash severity; the force of the deployment depends upon the severity of the impact. Four airbags offer specific protection: front airbags with advanced technology for driver and front passenger, and front-seat-mounted side-impact airbags.

Note: These pictures of airbags are for illustrative purposes only. Depending upon the type of accident, none, some or all airbags may deploy.

Active Head Restraints in the front seats reduce the risk of whiplash or neck/head/spine injury. When sensors detect a rear-end collision, the headrests rapidly and automatically pivot forward, supporting the driver's and front-seat occupant's heads.

Rollover Protection System, together with the reinforced A-pillars and windshield frame, is designed to create an occupant "safety cell" in the BMW 6 Series Convertible. Highly accurate sensors continually monitor vehicle angle, longitudinal and lateral acceleration, and amount of ground contact. When data indicate a rollover is imminent, rollover bars integrated behind the rear-seat headrests are deployed. Within fractions of a second they spring up and lock into place, helping to withstand rollover forces.

Body stiffness. The intelligent use of high-strength multi-phase steel and aluminum provides a high degree of body stiffness and crash resistance. Components, such as the A-pillars and windshield frame, include special reinforcements to provide optimum occupant protection.

THE ART OF KEEPING YOUR EYES WHERE THEY BELONG.

In addition to vehicle speed and Check Control data, the full-color Head-up Display can show Navigation system prompts, as well as warning messages from the Lane Departure Warning system and Night Vision with Pedestrian Detection system.

The full-color Head-up Display projects all important information in the driver's direct field of vision. This lets you keep track of everything that's happening on the road ahead.

The term "eyes-off-the-road time" means the amount of time it takes you to read information displayed in a vehicle's instrument panel, such as current vehicle speed and Navigation system instructions. Depending on the complexity of the data, eyes-off-the-road time can last between one and three seconds. However, in just two seconds, a car driven at 62 mph will have traveled a distance of 182 feet with the driver unable to pay full attention to what's happening on the road.

In 2003, BMW was the first European automotive manufacturer to offer a Head-up Display.

The concept of Head-up Display technology is to project essential information onto the windshield in the driver's field of vision. The projected image appears at an ergonomically ideal distance, seeming to hover above the front edge of the hood. The name of this technology speaks for itself: you can literally

keep your head up. The system allows you to keep an eye on key driving information while staying focused on the traffic ahead – so looking at the instrument panel is rarely necessary. Understanding data projected by the Head-up Display takes only half as long as reading them off the instrument panel. This minimizes the risk of missing the brake-lights of a vehicle ahead, as well as potential hazards in the roadway.

The display creates an optical illusion of hovering further out over the hood, to make focusing on traffic easier.

The Head-up Display projector is positioned behind the instrument panel. The image is projected onto the windshield, and reflected by it. To you, the driver, it does not appear on the windshield itself – instead it seems to hover outside the vehicle, at a distance of around two and a half feet. This virtual lengthening of the viewing distance makes reading data off the Head-up Display much easier than consulting the instrument panel. Your eyes do not have to adjust from near to far, or adapt from the well-lit road to the darker displays in the cockpit. This increases comfort and reduces eye strain.

The 6 Series Coupe and Convertible are the first BMW models to feature a full-color Head-up Display.

While previous versions of the Head-up Display showed only red, orange, yellow and green, the latest system can display the entire color range. In addition to vehicle speed and Navigation instructions, the Head-up Display can show warning messages from driver assistance systems, such as the Lane Departure Warning and the infrared BMW Night Vision with Pedestrian Detection. The Head-up Display greatly reduces eyes-off-the-road time, providing an important contribution to active safety. You can access the Head-up Display features and adjust brightness and image position via the iDrive Controller. As a result, you can react faster in extreme situations – and you'll be less prone to fatigue.

Sixteen speakers in the BMW 6 Series Coupe and 12 speakers in the Convertible generate a maximum of 118 decibels of acoustic pressure. Additionally, two subwoofers are under the front seats.

Dynamic design. Innovative technology. Impressive details. The interior of the BMW 6 Series provides a highly rewarding on-road experience – and the on-board entertainment has a central role to play.

The available Bang & Olufsen High-End Surround Sound System, for example, offers a level of sound perfection that even the best home audio systems rarely achieve. Driven by 1200 watts of power through 16 speakers in the Coupe, and 1000 watts through 12 speakers in the Convertible, the system generates up to 118 decibels of acoustic pressure, turning music into a sensuous feast. You'll feel a bass-heavy drum performance deep in your body; emotional solos will give you goosebumps. Close your eyes – the immediate surroundings of the interior will melt away, leaving you feeling as if you have been transported to a concert hall.

These effects are the product of the finest HiFi components, as well as outstanding digital signal processing. And whether the signals come from the CD drive or a connected MP3 player, in the BMW 6 Series Coupe, sound is transferred precisely and cleanly via a specially balanced amplifier. It is then generated by two subwoofers under the front seats, as well as seven tweeters and seven midrange speakers in the dashboard, the interior paneling and rear shelf. With their neodymium magnets and special honeycomb structure membranes, these components are nothing less than first class.

The Bang & Olufsen High-End Surround Sound System was specifically designed to perfectly counterbalance any acoustic disadvantages inherent in car design. Revolutionary Dirac Dimensions Technology calculates and

corrects, in advance, all sound distortions arising from the structures of the interior; asymmetrically positioned speakers also address the issue. The result: clean, natural sound throughout the cabin. Choose the Expanded mode, and music in the BMW 6 Series sounds as if the speakers are positioned around the car at a greater distance from each other than they actually are. Thanks to the Acoustic Lens technology, all on board, wherever they are sitting, will perceive the acoustic pattern of the system with the same degree of quality.

Thanks to its tasteful, modern design, the Bang & Olufsen High-End Surround Sound System is also easy on the eyes. Speaker frames are made of anodized aluminum and discreetly illuminated by white LEDs. In addition, the central speaker in the middle of the dashboard raises and positions the Acoustic Lens. It all combines to make any journey with the Bang & Olufsen High-End Surround Sound System a unique entertainment experience.

Equipment features and options.

Adaptive LED headlights for both high and low beams project an intense white light that simulates daylight for excellent visibility. Convenient features that improve visibility include Automatic headlights, Adaptive turning, Cornering Lights, four Corona headlight-rings, and available Automatic high beams. **Foglights** with LED technology improve visibility while adding a distinctive nighttime look.

Xenon Adaptive Headlights optimize road illumination when entering a turn or corner, helping to enhance visibility when driving at night. Adaptive sensors continuously monitor the angle of the steering wheel to determine the direction in which your vehicle is heading. The outer headlights swivel accordingly, up to 15 degrees left or right. **Xenon low- and high-beam headlights** illuminate the road ahead and to the side with brilliant clarity. An auto-leveling feature adjusts for varying passenger and cargo loads. **LED Corona headlight-rings** that frame the perimeter of both headlights and high beams also act separately as Daytime Running Lights and parking lights.

xDrive is an intelligent all-wheel-drive system that distributes drive power flexibly and variably to the front and rear axles for maximum traction, directional stability and driving safety in every road situation. This is the first time it is available in the BMW 6 Series. (Available for 650i).

Front signature kidney grille is framed in chrome. The slat fronts and sides in all 650i models are chrome; in the 640i models, the chrome slat fronts are set off by sides painted a contrasting black.

Taillight cluster with taillight, brakelight and turn-signal indicators incorporate LED technology for greater visibility. **Adaptive Brakelights** warn following vehicles by increasing in brightness when the intensity of your braking action is increased.

Power tilting glass panel roof on the BMW 6 Series Coupe gives the interior an even brighter, more spacious feel. It tilts up for greater ventilation, while a power sliding interior roofliner keeps the hot sun out.

BMW 6 Series Convertible soft-top, with its streamlined, aerodynamic shape, gives the Convertible a coupe-like silhouette. Triple-lined, the middle layer helps reduce wind noise and enhances insulation all year round. In conjunction with the retractable rear window, it provides effective airflow. Available in Black, Beige and, when equipped with the M Sport Package, Moonlight Black.

Fully automatic roof operation. Feel the need for sky? At speeds up to 25 mph, simply press a button and in just 19 seconds this fully automatic softtop lowers and stores neatly in the trunk. It takes a mere 24 seconds to reverse the process. In Convertibles equipped with Comfort Access, the softtop can also be opened via remote control.

Power glass rear window can be raised or lowered independently of the softtop. Raised with the softtop down, it minimizes road noise and breeze. When the top is up and the rear window is down, you enjoy enhanced ventilation throughout the cabin.

Convertible trunk with a compressible softtop storage box. The softtop takes up very little space when stored in its compartment behind the two rear seats. Even with the softtop down, the BMW 6 Series Convertible trunk can hold two golf bags. When the roof is up, the unused softtop storage compartment can be compressed, increasing available trunk space.

Three-spoke leather-wrapped multi-function sport steering wheel, featuring power tilt/telescoping adjustments, lets you keep both hands on the steering wheel while adjusting the audio, as well as your BMW-tested, Bluetooth[®] enabled mobile phone.³ The left-hand buttons operate all Cruise Control functions, while those on the right control audio functions, such as the radio, your mobile phone and Voice command.

³ Check for a list of tested mobile phones at your authorized BMW center or bmwusa.com/bluetooth.

Instrument cluster displays speedometer, tachometer, fuel gauge and engine oil temperature. Below the four dials is a high-resolution Info Display that shows data such as current fuel consumption, range, on-board computer functions, mileage and trip information. **Black Panel Display** technology shows the instrument cluster as a matte black surface when the ignition is switched off, with only the chrome rings of the circular instruments visible in 3-D. When the ignition is switched on, the chrome rings turn into full circles, and the dials and displays appear. Turning on the ignition also activates the Check Control messages.

Contrast stitching is included with the extended Black Nappa Leather instrument panel, door and side trims, and center console. Two distinctively stitched flat-felled seams of the same color as the Nappa Leather upholstery add a custom effect to the instrument panel to embellish the interior. Contrast stitching for Black Nappa Leather upholstery is Gray.

Heated steering wheel is a feature that, like heated seats, becomes a "must-have" once it's experienced. The heating switch is conveniently located on the multi-function steering wheel.

8-speed Sport Automatic transmission with Adaptive Transmission Control (ATC) provides extremely fast synchronized shifting in either the Sport or Manual shift mode. Includes racing-inspired steering wheel-mounted paddle shifters.

6-speed manual transmission delivers a precise, athletic feel. Its responsiveness is due, in part, to the synchronization of shifts from neutral to each gear. The shortened shift lever and "throw" add to the sporty feel of the gearbox. The sixth gear drops revs at highway speeds for smooth cruising and better fuel economy.

Driving Dynamics Control adjusts driving characteristics by pressing a button to select one of four settings. Choosing COMFORT, NORMAL, SPORT or SPORT+ mode adjusts the engine-throttle response, shift characteristics and power-steering assist. Another button disengages the traction control feature when driving on sand, gravel, or deep or packed snow.

Ceramic controls present a deep black glazed finish to various controls, such as the iDrive Controller bezel, front and rear ventilation controls, and audio controls. The black ceramic provides a rich, custom look and unusually unique feel to the interior.

¹ Run-flat tires do not come equipped with a spare tire and wheel.
² Driving over rough or damaged road surfaces, as well as debris, curbs and other obstacles, can cause serious damage to wheels, tires and suspension parts. This is more likely to occur with low-profile tires, which provide less cushioning between the wheel and the road. Be careful to avoid road hazards and reduce your speed, especially if your vehicle is equipped with low-profile tires. Performance tires are not recommended for driving in ice and snow conditions.

Ambiance lighting adds the drama of a warm reddish light that runs from front to rear beneath the inner door ledge. Ambiance lighting also includes soft on/off interior lights; reading lights; vanity mirror lighting; illumination in the front footwells, trunk, and storage compartments in the center console and doors; and illuminated door trims and entry sills with metal inserts.

Comfort Access unlocks and lets you start the vehicle simply by carrying the remote fob in a pocket or purse. In the Convertible, this feature also lets you raise and lower the roof remotely. Vicinity lights are included in the door handles.

Soft-close automatic feature gently closes the doors.

Tailpipes. The BMW 640i Coupe and Convertible have two round tailpipes on the right and left with chrome surrounds.

Tailpipes. The BMW 650i and 650i xDrive Coupe and Convertible display two rhombus-shape tailpipes covered with a chrome frame.

Black Nappa Leather with contrast stitching covers the instrument panel, upper door, side trims and center console, extending the rich look and feel of the interior. The contrast stitching matches the Nappa Leather seat upholstery color; Black Nappa Leather seats come with Gray contrast stitching.

Control Display shows the functions supported by the iDrive Controller, vehicle settings and radio, as well as the Navigation system. The free-standing, high-resolution flatscreen 10.2-inch color monitor is glare-free, and positioned at an ideal viewing height and distance.

Integrated Owner's Manual provides immediate access to all vehicle-specific information. This digital version of the traditional printed manual that is included with your BMW can be accessed via the iDrive and is shown on the Control Display. The system's user-friendly features include multi-media elements, such as animations and dynamic illustrations.

BMW Night Vision with Pedestrian Detection can scan up to 900 feet ahead using an infrared camera in the front bumper.¹ It can detect people and animals, as well as the direction of their movement, up to approximately 300 feet away, and displays their presence on the iDrive screen and Head-up Display (if so equipped). The system gives a visual warning as soon as pedestrians or animals move toward the road, alerting you to potential dangers significantly earlier, so you can react more quickly.

¹ Under optimal road conditions. Night Vision performance is also limited by rain, fog, humidity and other weather conditions.

Active Blind Spot Detection warns you if a vehicle is in your blind spot, or if a vehicle is approaching at high speed in the passing lane, by displaying a visual signal in the exterior mirror casing. The system also warns you by making the steering wheel vibrate should you then use the turn-signal indicator before executing a lane change.

Rear-view Camera shows, on the Control Display, the area behind your vehicle. Working with Park Distance Control, interactive guidelines indicate if a parking space can accommodate your vehicle, and display parking trajectories and turn tangles. Located behind the BMW badge on the trunk lid, the feature is activated by engaging either the reverse gear or the iDrive system.

Park Distance Control (PDC) sounds a warning beep as your front or rear bumper approaches an object, turning into a constant tone when the item is less than 12 inches away. Distance to the item is also shown in the Control Display.

Parking Assistant searches for suitable parking spots and then steers your vehicle into them. Press the "Park Assistant" button, then drive along potential parking spaces on the left or right side of the road, staying below 22 mph and no more than five feet away. Using ultrasonic sensors integrated into the side indicators, the system searches for and measures parking spaces. When a space at least four feet longer than your vehicle is spotted, it is shown on your Control Display. Shift into reverse and Parking Assistant takes control of steering your vehicle into the selected space; you operate the accelerator and brake pedals. Acoustic and visual warnings of Park Distance Control (PDC) provide assistance.

Front armrest with integrated storage compartment opens up to allow access to the iPod® and USB adapter, and Smartphone Integration adapter.

Premium anti-theft AM/FM stereo CD/MP3 audio system with Radio Data System (RDS), Auto-Store, and 3-channel FM diversity antenna. The Coupe's 16 speakers and the Convertible's 12 speakers feature DIRAC signal processing and Surround mode, and discrete 5.1 multi-channel sound. The 7-band equalizer incorporates an analog amplifier with vehicle-specific equalizing; it outputs 600 watts in the Coupe and 500 watts in the Convertible.

2-zone automatic climate control allows driver and front passenger to select individual temperatures and choice of fan speeds, as well as choose automatic or manual airflow and recirculation. The automatic recirculation control activates whenever certain air pollutants are detected. The system also offers a mist-up sensor, solar sensor and residual heat use.

Heated front seats are a welcome feature for driver and front passenger in cooler weather. By pressing the icon button, seat surface and backrest are heated and quickly radiate comfortable warmth in your choice of settings.

20-way power Multi-contour front seats conform to your body to provide optimum support and exceptional comfort over long distances. In addition to horizontal, vertical and angled adjustments, Multi-contour seats include an articulated upper backrest, comfort headrest (two-way power, two-way manual "relax headrest"), and four-way power-adjustable lumbar support. Both driver's and front-passenger's seats include memory function.
Active front seats (not shown) imperceptibly raise and lower the left and right halves of the seating surface. This movement keeps the spine in motion, exercising various support muscles to help reduce fatigue on longer trips.
Ventilated front seats (not shown) gently blow warm or cool air through the micro-perforations in the leather to keep driver and front passenger comfortably dry in hot weather, and warm in colder weather.

We believe that a premium ownership experience should feature performance and luxury, as well as safety and convenience. We believe you should be able to drive a BMW to its potential, while enjoying peace of mind and reduced cost of ownership. That's the idea behind **BMW Ultimate Service**[®]: a suite of comprehensive programs and services that are included in every new BMW vehicle.

BMW Ultimate Service starts with the **New Vehicle/SAV Limited Warranty**,¹ providing you with coverage for the first four years or 50,000 miles, whichever comes first. Additionally, you have 12-year, unlimited-mileage warranty protection against corrosion and rust perforation.¹ The **BMW Maintenance Program**² and **BMW Assist**,^{TM3} as well as **BMW Roadside Assistance** come standard.

GOING BEYOND ENGINEERING: THE HIGH-PERFORMANCE BMW OWNERSHIP EXPERIENCE.

BMW Maintenance Program is one of the most comprehensive maintenance programs in its class. We cover all factory-recommended maintenance during the New Vehicle/SAV Limited Warranty coverage period. This includes scheduled oil services and inspections. Also covered is the replacement of items that are subject to normal wear and tear, such as brake pads, wiper blade inserts and engine drive belts.² And, thanks to BMW's advanced engineering, most owners enjoy a well-balanced maintenance schedule, with flexible routine service intervals that can save you time. When your vehicle requires attention, your authorized BMW center ensures that it receives only genuine BMW parts – your assurance of exacting quality standards.

BMW Assist Safety Plan³ is a four-year program that lets you enjoy peace of mind knowing that a friendly response specialist is there to help you, 24/7, at just the push of a button. The Safety Plan includes Automatic Collision Notification, Emergency Request, Enhanced Roadside Assistance, Door Unlock, Stolen Vehicle Recovery and Customer Relations. Included in the BMW Assist Safety Plan, MyInfo allows you to send business locations and street addresses with their associated phone numbers from the Google MapsTM website directly to your BMW. The destination can be sent to your Navigation system for turn-by-turn directions. With the BMW Navigation system and your mobile phone linked to your BMW via Bluetooth[®] technology, BMW's Mobile Office feature⁴ transfers text messages and emails to your iDrive Display screen and reads them aloud to you. A Calendar and To-do List can also appear on your Display screen while en route. Running late? Click on the phone number in the Calendar to call your appointment. For a list of tested mobile phones, visit bmwusa.com/bluetooth.

For the ultimate in coverage, add the optional **BMW Assist Convenience Plan**.⁵ You'll enjoy unlimited access to personalized Directions, Traffic and Weather reports, as well as our Concierge feature, which can send a destination address and phone number, such as a restaurant or hotel, right to your BMW. You can make up to four operator-assisted calls per year with Critical Calling if your cell phone is not available, or if its battery is discharged. BMW Online allows access to up-to-date fuel prices and the latest weather forecasts, as well as Bloomberg's stock indices and the powerful reach of the Google Maps database – delivered to the iDrive Display right inside your vehicle.

BMW's unique **TeleService**, included in the BMW Assist Safety Plan, continually monitors specific parts that are subject to wear and tear – including the engine oil, micro-filter, spark plugs, brake linings and various fluids – as well as services that require attention at regular intervals, such as vehicle service inspections. This data is automatically transmitted to your authorized BMW center, which

will then call you to schedule a service appointment. You don't have to keep track of when your vehicle requires routine maintenance. An added benefit: any needed maintenance service parts will already be on hand, so your BMW is serviced and returned to you as quickly as possible. And because they use only Original BMW Parts, you can rely on expert fit and long-lasting BMW quality. For more details on TeleService, visit bmwassist.com.

The Ultimate
Driving Machine®

BMW and the environment.

BMW is a strong proponent of the environment and social responsibility. We launched BMW EfficientDynamics back in 2000 – the philosophy of providing greater power with increased efficiency and fewer emissions. This has resulted in significant benefits today – for our customers, the climate and the environment.

That year, ecological sustainability was also declared one of BMW's core strategic principles; it is now firmly anchored in our entire production chain. It starts with the development of fuel-saving and alternative vehicle concepts, continues with environmentally friendly production processes, and ends with innovative recycling methods. This effort has been recognized worldwide; in 1999, BMW AG – the parent company of BMW of North America and BMW Manufacturing Co. in Spartanburg, SC – was the first automotive company to be represented on the Dow Jones Sustainability Group Index. It has remained on the Index ever since; moreover, since 2005, BMW has been voted the world's most sustainable automobile manufacturer. At BMW, we strive for and achieve high performance in all we do.
